About this guide

This guide documents only features that exist in the current Feedee Forums Laravel application. Screenshots were captured from the live admin interface. Personal emails and names in screenshots have been masked where practical.

SECTION 1

Introduction

The Feedee Forums admin panel is the control centre for running the community website at **https://feedeeforums.com/**. Administrators use it to moderate posts, review member activity, respond to contact enquiries, configure the public Support button, monitor support-link clicks, and manage email delivery settings.

Purpose of the admin panel

- Keep the public feed safe, friendly, and on-topic.
- Approve, reject, feature, or permanently delete posts and their media.
- Monitor registered customers and their posting activity.
- Read and manage messages submitted through the contact form.
- Control Support payment links and review click analytics.
- Configure outbound email used for rejection notices and contact alerts.

How administrators manage the website

Only accounts with the **admin** role can open `/admin`. After login, admins are redirected to the admin dashboard. The dark sidebar provides navigation between all working admin sections. Changes made in Posts, Settings, and Contacts affect the live public website immediately.

Overview of available features

Section	What you can do
Dashboard	View pending posts, unread messages, approvals, member counts, weekly chart, and support overview
Support analytics	Analyse Support-button payment-link clicks by period, country, platform, and page
Posts	Moderate posts; toggle required approval; approve / reject / feature / delete
Customers	Browse registered members, filter activity, open their posts, email them
Contact messages	Read, mark unread, reply by email, delete enquiries
Settings	Configure Support button links and SMTP / email settings

SECTION 2

Admin login

How to access the admin panel

1. Open the website login page: **https://feedeeforums.com/login**
2. Sign in with an administrator account (email or username + password).
3. After a successful login, admin users are taken to **/admin** (the Dashboard).
4. You can also visit **https://feedeeforums.com/admin** directly. Guests are redirected to login first.

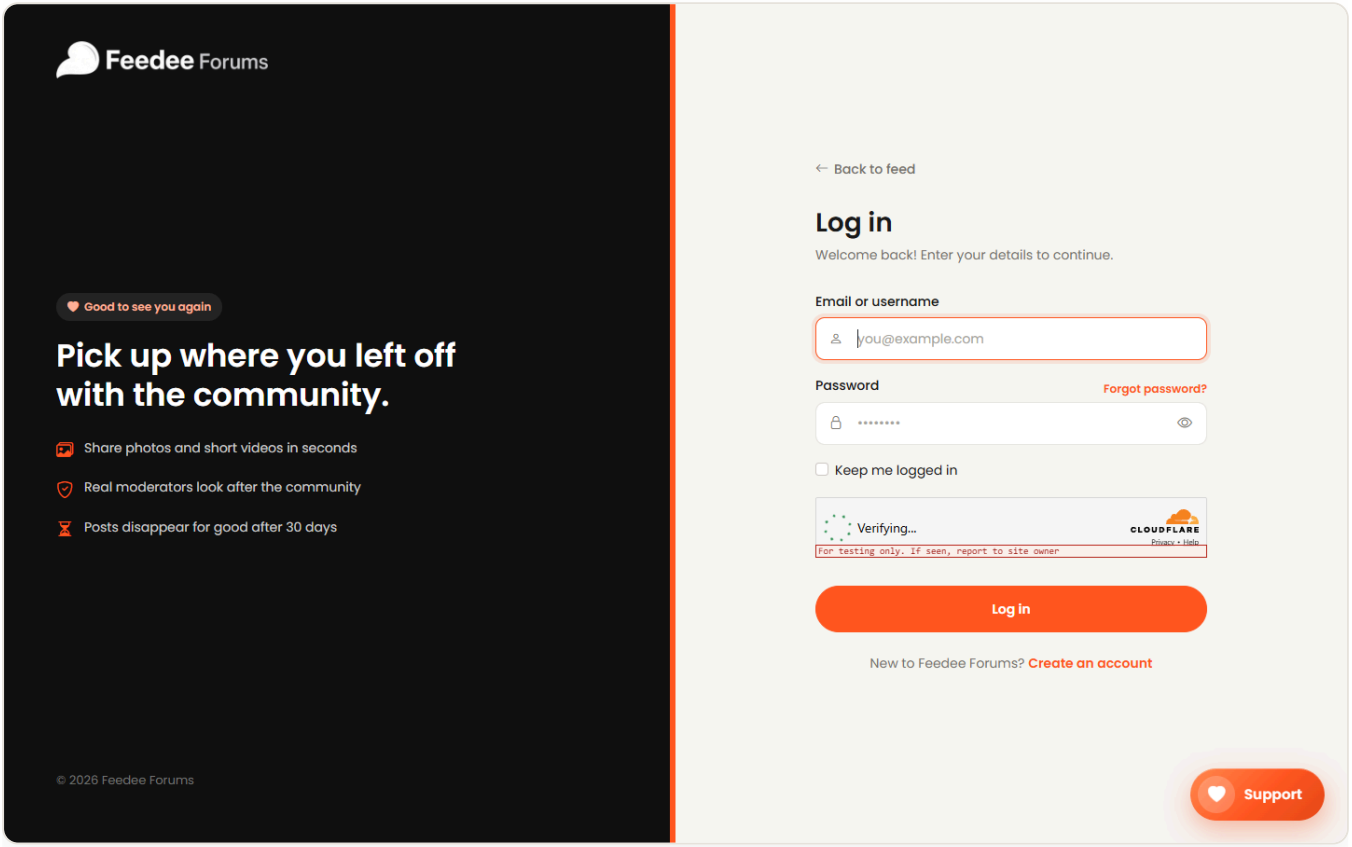

Figure 1 — Public login page used by administrators and members.

How to log in

1. Enter your admin **email or username**.
2. Enter your **password**.
3. Optionally tick **Keep me logged in** on a private device only.
4. Click **Log in**.

Login security recommendations

- Use a unique, strong password for the admin account.
- Do not use “Keep me logged in” on shared or public computers.
- Never share admin credentials in chat, email, or screenshots.

- If you forget the password, use **Forgot password?** on the login page.

How to log out safely

1. In the admin top-right corner, open the administrator menu.
2. Choose **Log out**.
3. You are returned to the public site and the session ends.

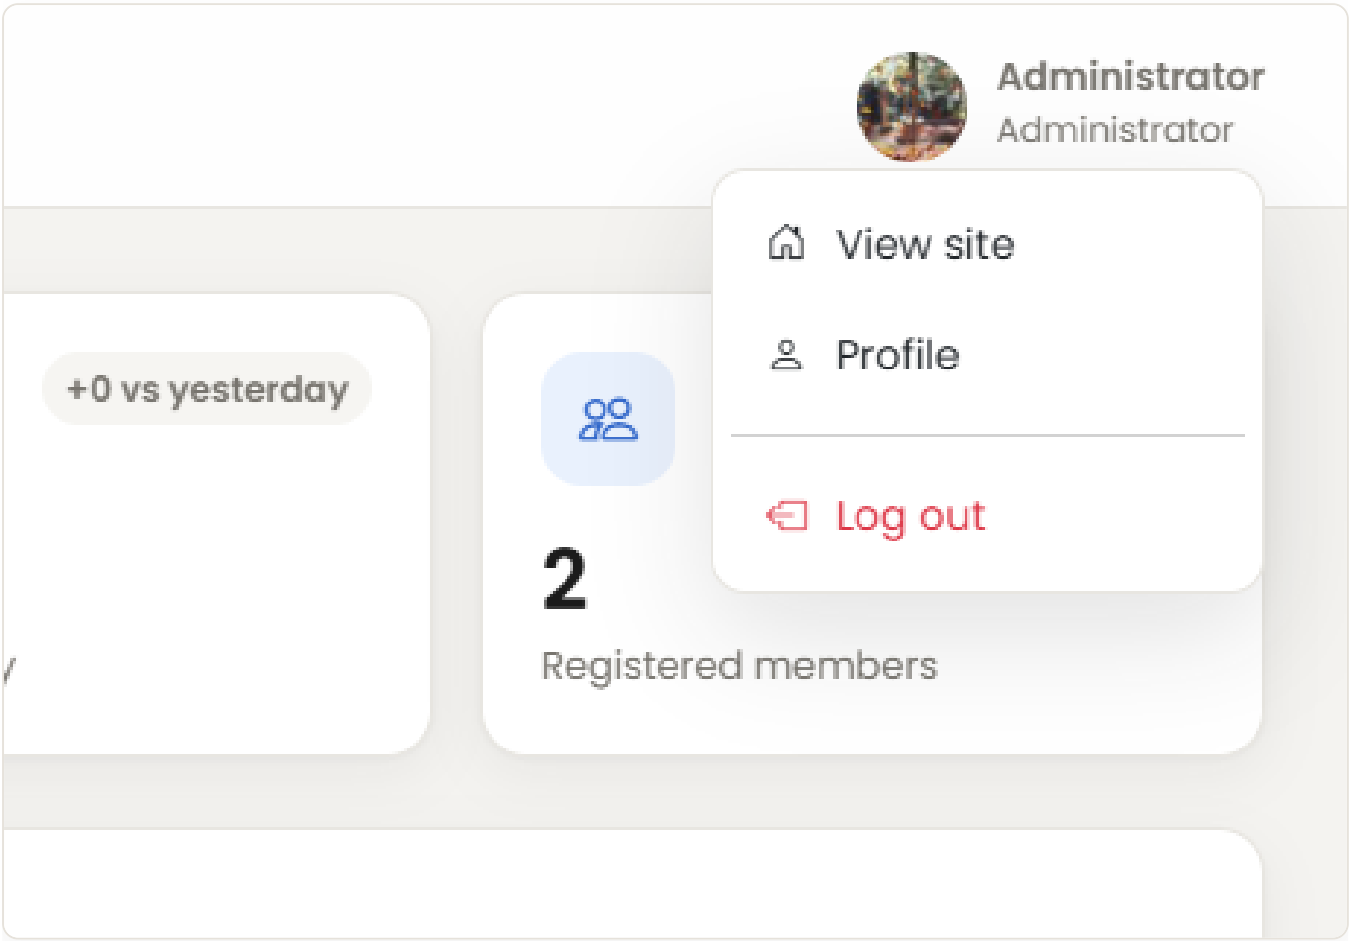

Figure 2 — Administrator menu: View site, Profile, and Log out.

SECTION 3

Dashboard

The Dashboard is the home screen of the admin panel. It summarises moderation workload, membership, and recent support activity so you can decide what needs attention first.

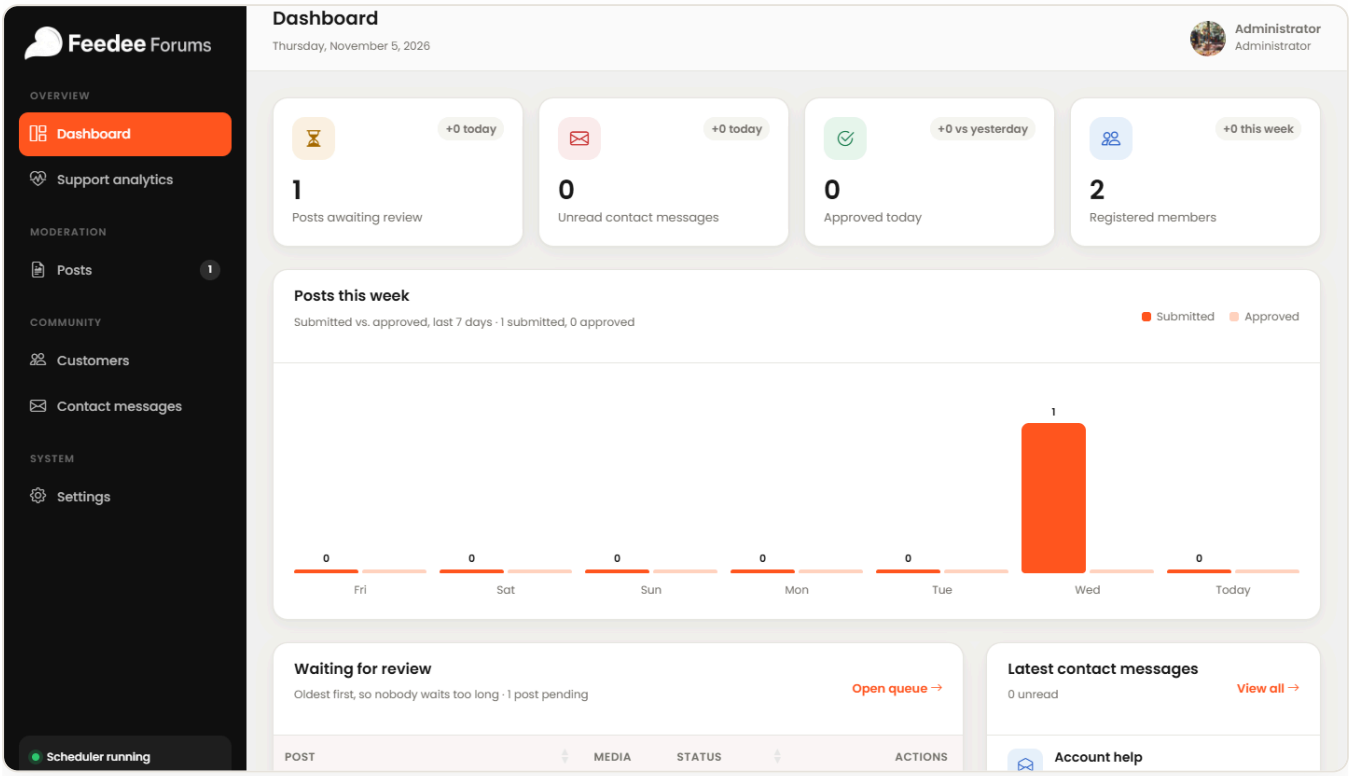

Figure 3 — Dashboard overview with sidebar navigation and summary cards.

Statistics and summary cards

Card	Meaning
Posts awaiting review	Number of posts currently in *Pending* status. Clicking opens Posts.
Unread contact messages	Contact form messages not yet opened. Clicking opens Contact messages.
Approved today	Posts approved today, compared with yesterday.
Registered members	Customer accounts, with new sign-ups in the last 7 days.

Understanding dashboard information

- **Posts this week** — bar chart of submitted vs approved posts for the last 7 days.
- **Waiting for review** — oldest pending posts, with quick moderation actions and a link to the full queue.
- **Latest contact messages** — newest enquiries with a link to the full inbox.
- **Support analytics strip** — recent Support-button activity with a link to the full Support analytics report.
- The sidebar footer shows whether the Laravel scheduler appears to be running (important for 30-day post cleanup).

How to navigate the admin panel

Sidebar

Use Overview, Moderation, Community, and System groups to open Dashboard, Support analytics, Posts, Customers, Contact messages, and Settings.

Top bar

Shows the current page title, date or short description, and your administrator menu (View site / Profile / Log out).

SECTION 4

Customer management

Customers are registered member accounts (non-admin users) who can create posts on the public site.

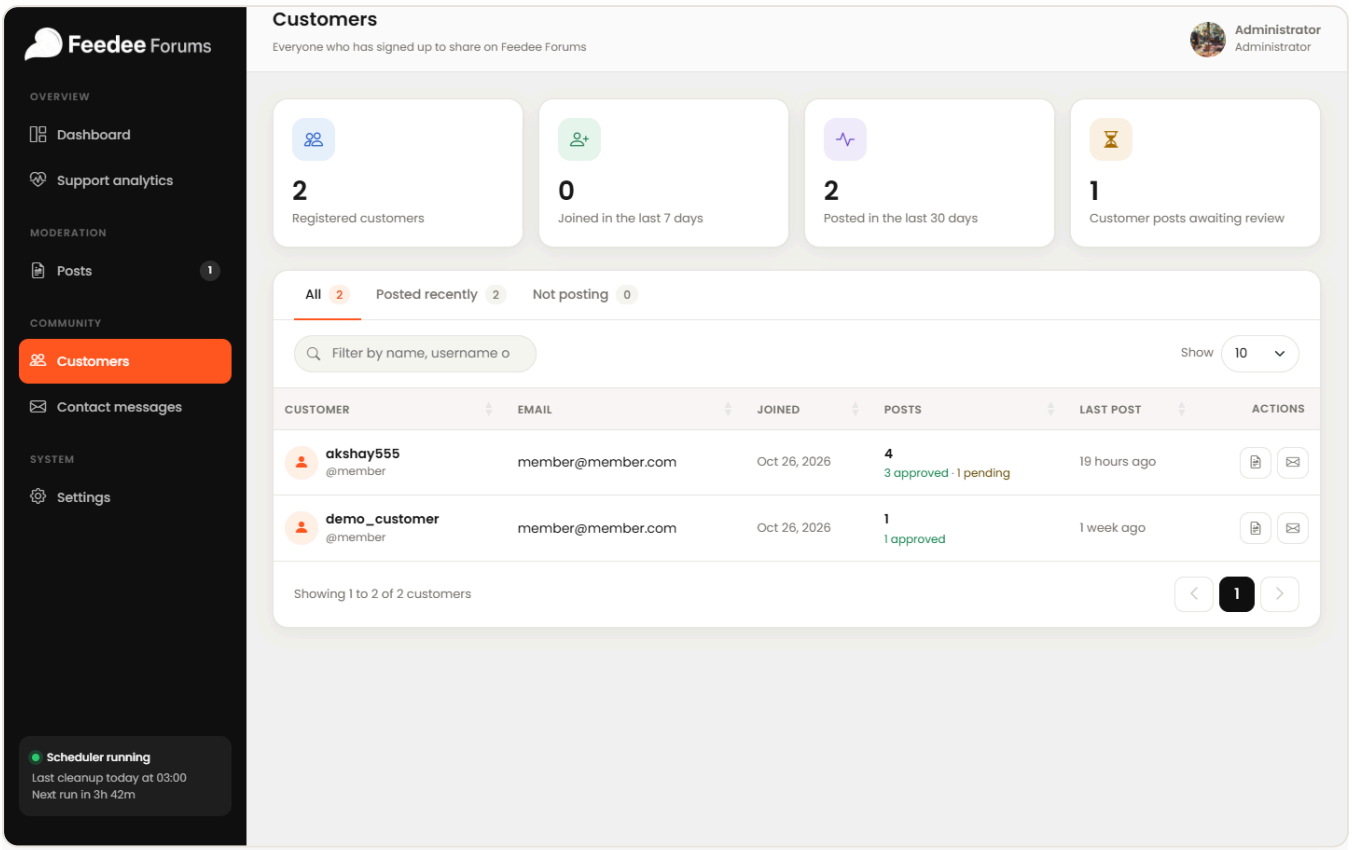

Figure 4 — Customers list with activity stats and filters.

View registered customers

Open **Customers** in the sidebar. Summary cards show total registered customers, joins in the last 7 days, members who posted in the last 30 days, and customer posts awaiting review.

Search and filter customers

- **Tabs:** All · Posted recently · Not posting
- **Search:** filter by name, username, or email
- **Show:** choose 10 / 25 / 50 rows per page

View customer details

Each row shows the display name, username, email, join date, post counts (approved / pending / rejected), and last post time.

Available customer actions

Action	What it does
View posts (document icon)	Opens the Posts page filtered to that customer's name. Disabled when the customer has no posts.
Email customer (envelope icon)	Opens your email client with a mailto link to the customer.

> **Note**
> The current Customers page does not include edit, suspend, delete-account, or password-reset actions for members. Account changes are limited to viewing activity and contacting the member by email.

SECTION 5

Post management

Posts is the main moderation workspace. Use it to review submissions, publish or reject content, feature posts, and permanently remove posts with their media.

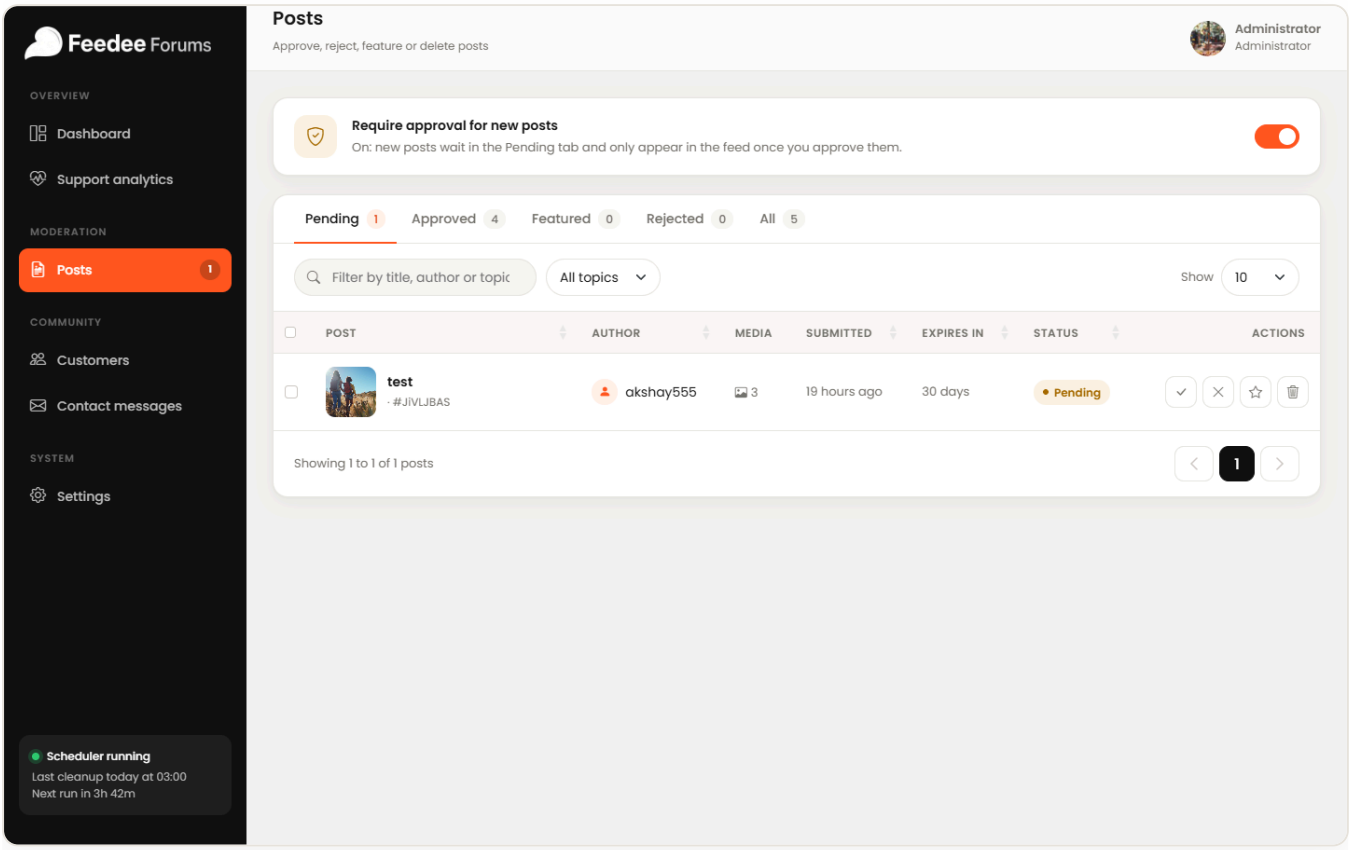

Figure 5 — Posts page with approval switch, status tabs, and moderation actions.

Require approval for new posts

- **Off:** new posts appear in the public feed immediately. You can still reject, feature, or delete them later.
- **On:** new posts start as Pending and stay hidden until approved.

Understand moderation status

Status / tab	Meaning
Pending	Waiting for admin review
Approved	Live in the public feed
Featured	Pinned in the Featured area above the chronological feed
Rejected	Not shown publicly; author is emailed the reason
All	Every post regardless of status

Approve, reject, feature, or delete

1. Open **Posts** and choose the relevant tab (for example Pending).
2. Optionally search by title, author, or topic, or filter by topic.
3. Use the row action buttons:
   - **Approve (✓)** — publish to the feed and start the 30-day lifetime.
   - **Reject (✕)** — choose a reason (and optional note); the author is emailed.
   - **Feature (★)** — pin at the top of the feed (also approves if pending).
   - **Delete (trash)** — permanently remove the post and all media after confirmation.
4. For bulk work, tick several posts and use the bulk bar: Approve, Feature, Reject, Delete.

Image and video management

- Each post row shows media counts (photos / videos) and a thumbnail when photos exist.
- Click the post title to open the public post preview in a new tab and review every photo/video before approving.
- Deleting a post removes original files and generated thumbnails from storage. This cannot be undone.

30-day automatic removal

Approved posts expire **30 days** after they go live. The Posts table shows remaining days under *Expires in*. Cleanup is performed by the Laravel scheduler. The Dashboard sidebar indicates scheduler status. On Hostinger, a cron entry should run `php artisan schedule:run` every minute.

SECTION 6

Contact messages

Messages submitted through the public contact form appear here for administrators to read and handle.

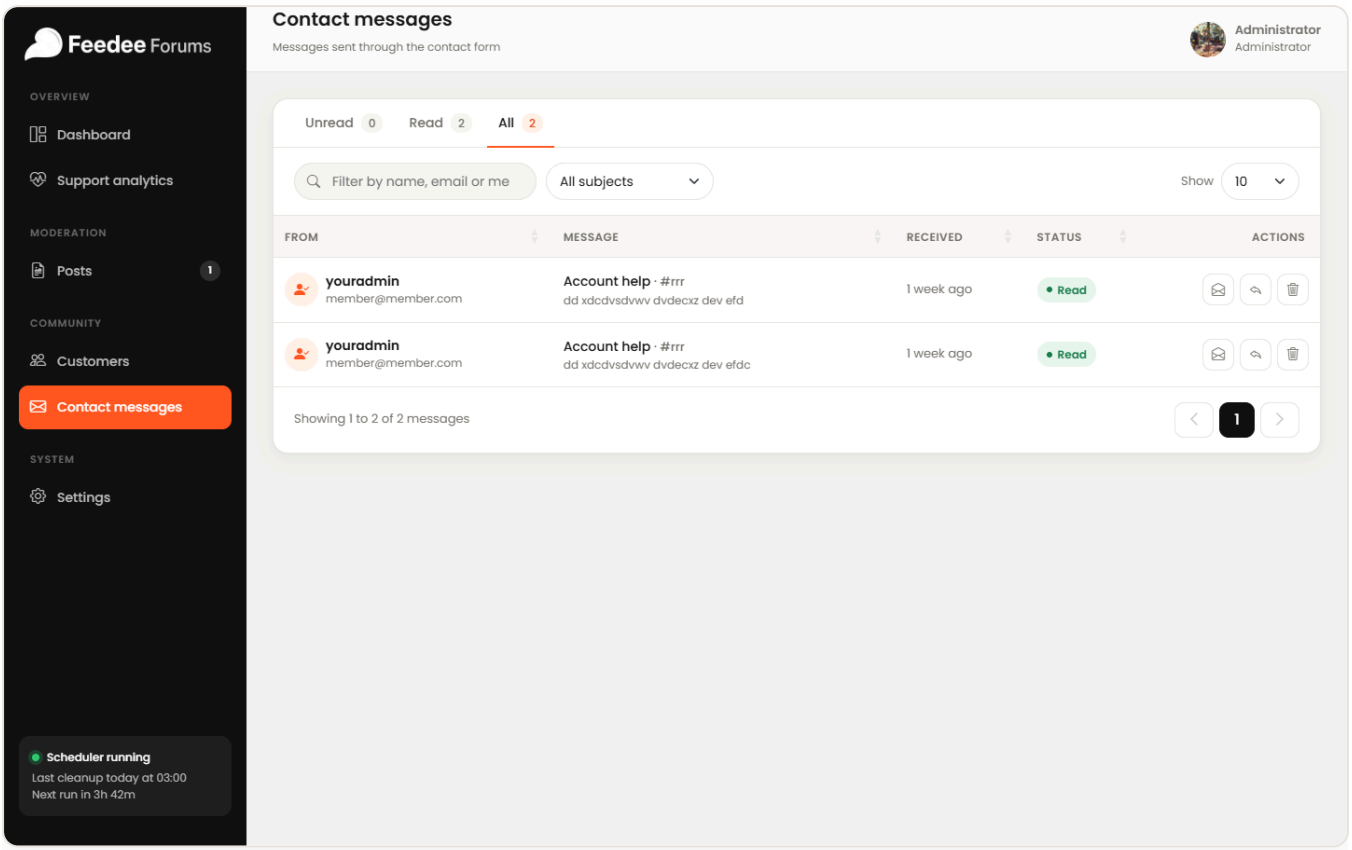

Figure 6 — Contact messages inbox with unread / read filters.

View and filter messages

- Tabs: **Unread**, **Read**, **All**
- Search by name, email, or message text
- Filter by subject

Read message details

1. Click a message row or the open-envelope action.
2. Opening a message marks it as read automatically.
3. The detail page shows the full message plus sender details, linked account (if any), optional post reference, received time, and IP address.

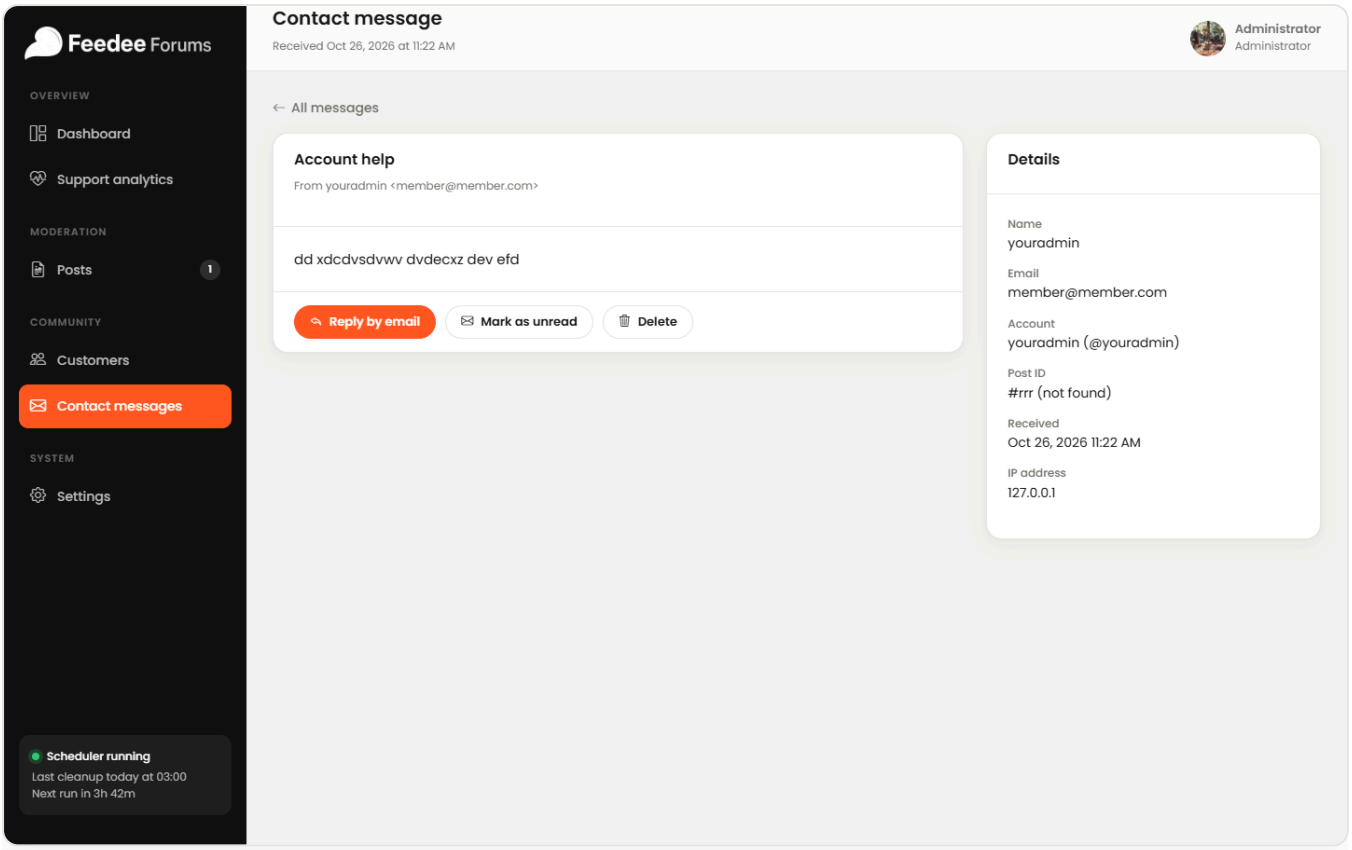

Figure 7 — Contact message detail with reply, unread, and delete actions.

Managing enquiries

Action	Purpose
Reply by email	Opens your mail client addressed to the sender
Mark as unread	Returns the message to the unread queue
Delete	Permanently removes the message after confirmation

Typical workflow: open new messages daily → reply from your email → leave as read for records, or delete when no longer needed.

SECTION 7

Website settings

Settings controls the public Support button and the email system used for contact alerts and post-rejection notices.

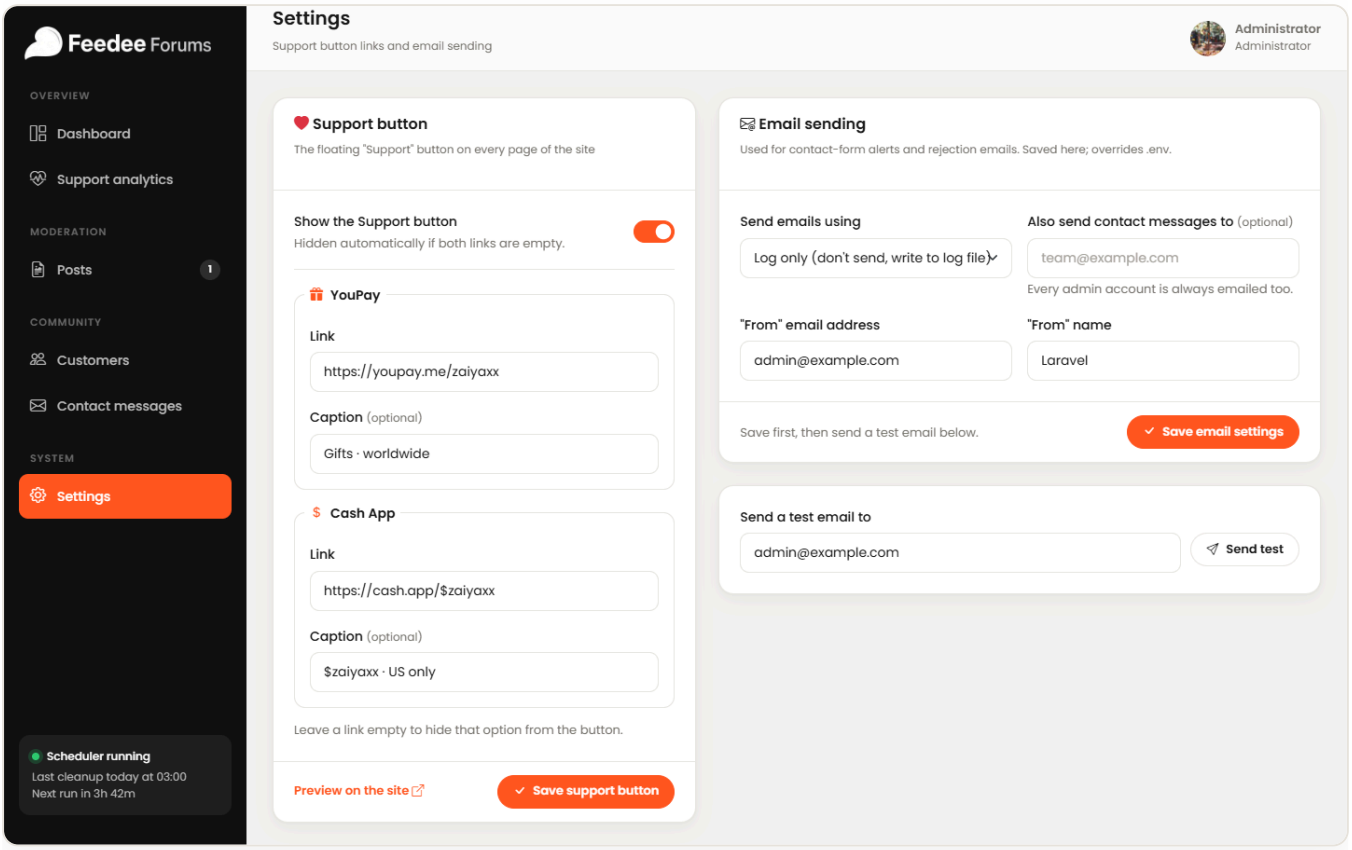

Figure 8 — Settings: Support button configuration and email sending.

Support button settings

Setting	Effect on the public website
Show the Support button	Turns the floating Support button on or off site-wide
YouPay link / caption	Payment option shown in the Support dial
Cash App link / caption	Second payment option in the Support dial

- Leave a link empty to hide that option.
- If both links are empty, the button is hidden automatically even when enabled.
- Click **Save support button**, then use *Preview on the site* to verify.

Email sending settings

- **Send emails using:** Log only (writes to the server log) or SMTP server.
- **Also send contact messages to:** optional extra recipient. Every admin account is always emailed too.

- **SMTP host / port / encryption / username / password:** required when SMTP is selected. Password is stored encrypted; leave blank to keep the saved password.
- **From email / From name:** appear on outbound messages.

Precautions

Incorrect SMTP settings can stop rejection emails and contact alerts. Always click **Save email settings**, then **Send test** to your own address before relying on production mail.

SECTION 8

Support button & analytics

Floating Support button

When enabled in Settings, a floating **Support** button appears on public pages. Visitors can open YouPay or Cash App links from the dial. Admin clicks are not tracked the same way as visitor clicks.

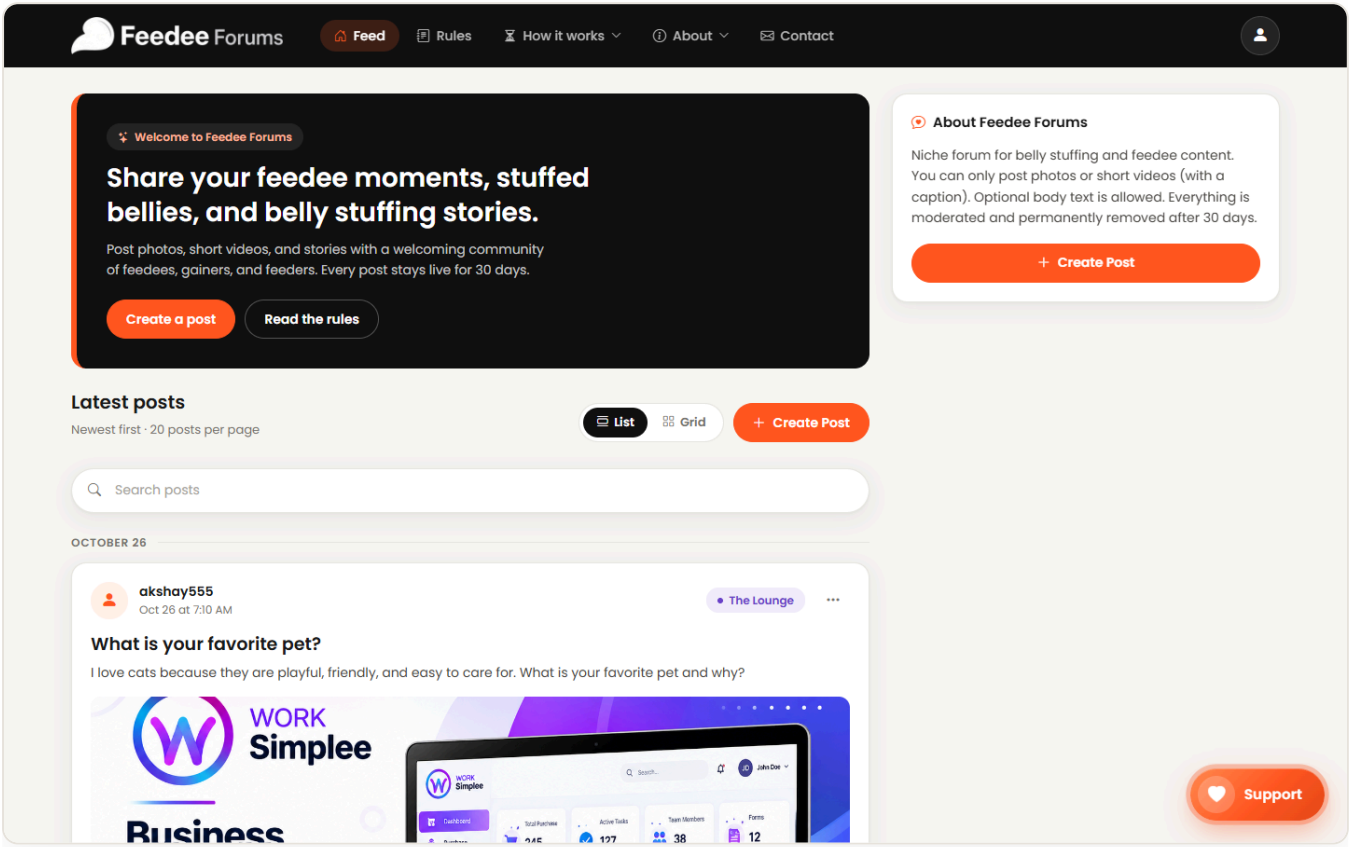

Figure 9 — Public website showing the floating Support button (bottom-right).

Support interaction tracking

The application records clicks on Support payment links. These are **clicks, not payments**. A click never proves that a donation was completed.

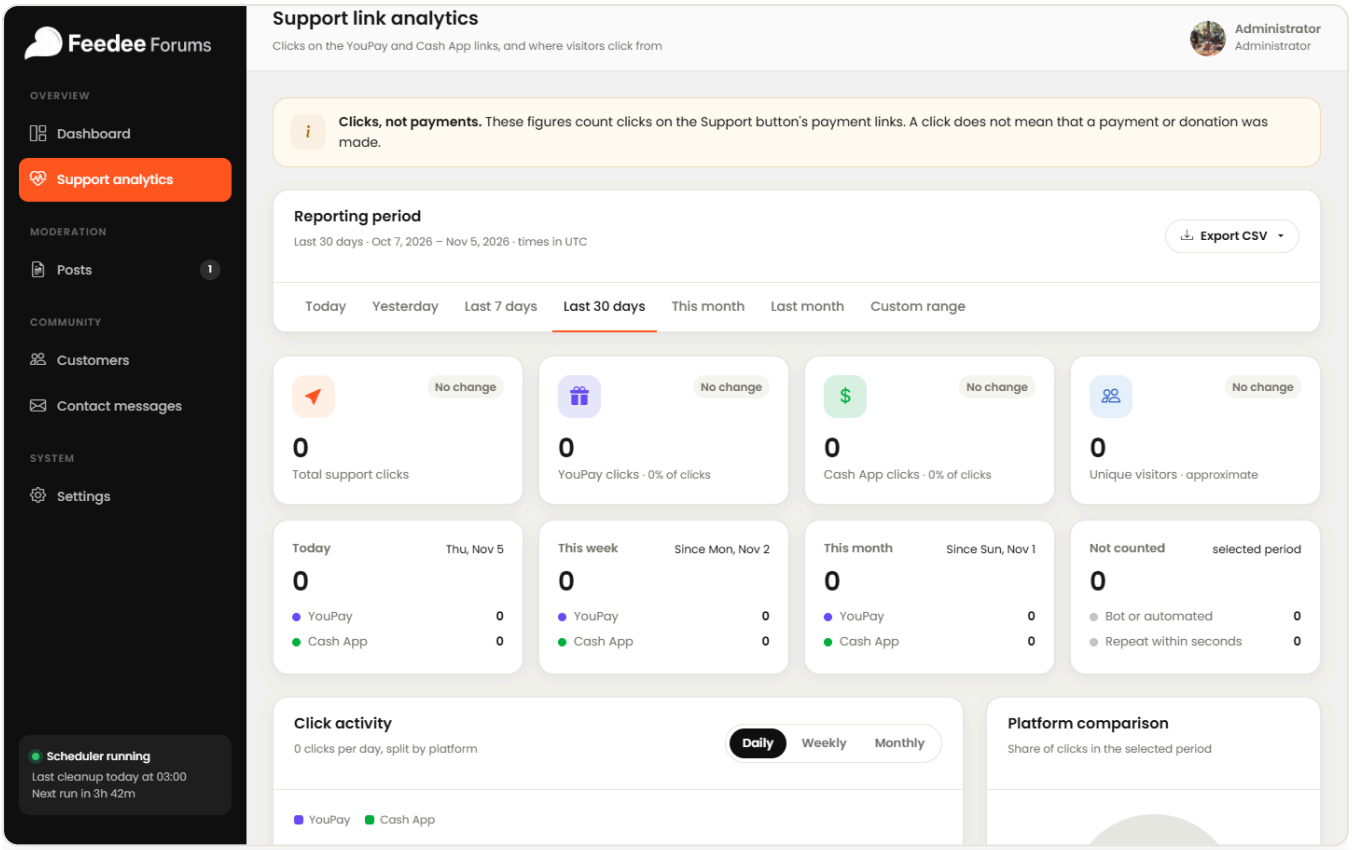

Figure 10 — Support link analytics with period filters and totals.

Available analytics (currently implemented)

- Reporting periods: Today, Last 7 days, Last 30 days, This month, Custom range
- Totals: total support clicks, YouPay clicks, Cash App clicks, approximate unique visitors
- Fixed period cards and “Not counted” filtered clicks
- Country breakdown (requires GeoIP database import on the server)
- Daily statistics and recent activity list
- CSV export: Country report, Daily statistics, Every click

How administrators monitor support activity

1. Open **Support analytics** from the sidebar.
2. Choose a reporting period.
3. Review platform split, countries, and recent activity.
4. Use **Export CSV** when you need a spreadsheet for the client or accounting follow-up.

SECTION 9

Other admin features

In-app admin guide

An HTML admin guide is available at **/admin/docs**. It covers reviewing, featuring, deleting posts, reports guidance text, cleanup cron notes, and moderation tips. It is not linked in the sidebar in the current build, but the route is active for signed-in admins.

Profile

From the administrator menu, **Profile** opens the shared member profile editor where the logged-in admin can update account details and password.

View site

View site opens the public feed so you can verify how moderated content appears to visitors.

Scheduler / cleanup indicator

The sidebar shows a scheduler status widget. Automatic 30-day post deletion depends on the server cron calling Laravel's scheduler.

> **Reports page status**
> A `/admin/reports` view exists in the project, but it is presently a static mock-up with sample figures and is not wired to a working reports backend. Do not treat it as a live moderation tool. See Appendix B.

SECTION 10

Security best practices

- **Protect administrator credentials.** Store them in a password manager. Never place them in shared documents or chat.
- **Use strong passwords** and change them if a device is lost or access may have leaked.
- **Log out** after finishing administrative work, especially on shared computers.
- **Avoid sharing administrator access.** Create separate admin accounts if multiple people need access.
- **Be careful when deleting.** Post deletion removes media forever. Contact message deletion cannot be undone.
- **Treat contact IPs and emails as private.** Do not publish reporter or sender details.
- **Test email settings** with a test send before rejecting posts in production.

SECTION 11

Troubleshooting & FAQ

I cannot log in to /admin

- Confirm you are using an account with the admin role.
- Try logging in at /login first, then open /admin.
- Reset the password with Forgot password if needed.

Pending posts are not appearing in the feed

If “Require approval for new posts” is on, approve them from Posts → Pending. If it is off, new posts should appear immediately unless rejected or deleted.

Images or videos are missing

- Open the post from the admin table to confirm the media still exists.
- If the post was deleted or expired after 30 days, media is permanently removed.
- Check that storage/public links are correctly configured on the server.

Contact messages are not arriving by email

- Open Settings → Email sending and verify SMTP details.
- Send a test email.
- If the mailer is “Log only”, messages are written to the application log instead of being delivered.
- You can still read every submission under Contact messages in the admin panel.

Dashboard numbers look unexpected

Cards count live database records. “Approved today” includes auto-approved posts (when approval is off) based on creation/moderation time. Refresh the page after moderating.

Support analytics countries show “Unknown”

Country detection needs the GeoIP database. On the server, run the project’s GeoIP import command (documented in the Support analytics page notice) and ensure the scheduler can refresh it monthly.

End of main guide. Appendices follow.

APPENDIX A

Feature summary

Feature	Status	Notes
Admin login / logout	Working	Role-gated /admin area
Dashboard stats & chart	Working	Pending, messages, approvals, members
Post moderation	Working	Approve, reject, feature, delete, bulk actions
Post approval switch	Working	On Posts page
Customer list	Working	Search/filter; view posts; mailto
Contact inbox	Working	Read/unread, reply, delete
Support button settings	Working	YouPay + Cash App
Mail settings + test	Working	Log or SMTP
Support link analytics	Working	Ranges, platforms, CSV export
30-day auto deletion	Working	Requires server scheduler/cron
In-app /admin/docs guide	Working	Route exists; not in sidebar

APPENDIX B

Unavailable or incomplete features

These items were found during inspection but should **not** be treated as finished client-facing tools yet:

Item	Why it is excluded / limited
Admin Reports UI (`/admin/reports`)	Static mock page with hard-coded sample statistics; no working backend controller for real member reports.
Customer edit / ban / delete	Not implemented on the Customers page.
Assigning staff roles from UI	No admin UI to promote/demote users.
In-panel reply composer for contacts	Reply uses external mailto only.
Sidebar link to /admin/docs	Guide route works but is not listed in the current sidebar navigation.

Document control

Prepared for client delivery for https://feedeeforums.com/. Based on the Laravel codebase and screenshots captured from the admin panel. Version 1.0 — November 2026.
